

# Virtual Locker Helmet Part Guide

# Zebra Virtual Locker Helmet Part Guide

- In order to ease the complexity of identifying the parts for different helmet models, we've created this photo guide.
- The part field names in Zebra will eventually be changed to be consistent with the part names used by helmet manufacturers, but in the meantime, these parts will appear as "Side Part #", "Top Part #", etc.
- Zebra will also be adding a pop-up feature to include images of each of the helmet models, similar to those in this photo guide.
- We are also working with helmet manufacturers to figure out ways to have these parts auto-populate.

# Other Notes

- We've tried to highlight the default padding options using "\*" to make it easier to identify the pads for helmets that have not yet been customized for a player.
- If the part you're using for a helmet does not appear in the drop down list, please choose the "Other" option and describe it in the Notes field. We'll update the parts lists on occasion to include these.
- During the data migration from Helmet Tracker to Zebra, if a helmet part was selected for a helmet that was incompatible with the helmet model or we were unable to match it with a part in the parts list, the part was removed from the helmet. You may have to re-select the parts for some of your helmets because of this.
